

RODRIGO SANTIAGO

Architect & Software Engineer | Clouds Solutions AWS, Azure & SAP BTP

☎ +1 (314)828-9210 @ Engineer@rodrigo-santiago.dev 🔗 linkedin.com/in/santiago-rodrigo 📍 Austin, TX - USA 🇺🇸 US Citizen

SUMMARY

Versatile Architect and Software Engineer specializing in cloud-based, full-stack solutions with 20+ years driving technology excellence in finance and enterprise systems promoting migrations and integration of legacy systems. Expert in AWS, Azure, and SAP BTP platforms with strong command of .NET and SAP development, integrating diverse systems including banking and data transfer solutions. Proven technical leader adept at applying Agile workflows and advanced design principles to produce reliable, scalable applications. Looking to contribute architecture and integration skills to forward-thinking organizations focused on innovation and growth.

Experience on multi cloud deployment (AWS, Azure and SAP BTP), performing design and developing for Full Stack developments on:

.Net : C#, TypeScript, JavaScript, SQL, SQL Server, MongoDB, PostgreSQL, UI frameworks (React.js, Angular.js), ORM (Entity framework)

SAP : I experience in SAP processes (OTC, PTP, HTR) enhancing them using ABAP, AMDP, Fiori, UI5, CAPM, RAP, APIs and Integrating CPI (PI/PO)

EXPERIENCE

07/2025 - Present

Austin, TX

● Sr Software Engineer

Emerson Electric

Architect and develop an application for a large industry lead automation software Emerson DeltaV system, focusing on:

- Generate software designs, architecture, and human-centered design requirements and specifications
- Use best practices to build high-quality software that meets our stringent definition of done using agile methodology
- Develop Windows Server applications and UI utilizing C# and ASP.NET, OAuth via Microsoft Identity
- Agile activities like sprint planning, retrospectives, and program increment planning to develop estimates and dev status to the team
- Collaborate with the team's product owner to integrate new features
- Diagnose, validate, resolve software issues, and write acceptance tests
- Tech Stack: ASP.Net, .Net 4.X, C#, SQL Server, Microstrategy, EF, OPC Sensors Management

04/2022 - 04/2025

Florida, USA - Remote

● Architect & Sr Software Engineer

Finexio

Architected and developed application Payments as a Service allowing Finexio's customers to get off paper checks, save time, reduce costs, increase cash flow, and minimize fraud risk.

- Develop high scalable and reliable finance system from scratch using C# .Net 8.0, AWS lambda, Serverless, SQS, S3, EC2 for integrating with banks and credit card companies
- Developing frontend in TypeScript on React.js, using material UI as design framework connecting to C# backend APIs
- Integration with Mastercard and J.P. Morgan processing payment, card emission and reconciliation decreasing processing time by 30%
- Migration of Python legacy system to C# microservices orchestration then using Amazon SQS and Lambda functions
- Microservices C# on SQL (Postgress) and NoSQL (MongoDB) databases, OAuth authentication using Auth0 for Google and Microsoft ID
- Implemented Generative AI for orders processing issues creating list of fixes for customer service, via Amazon Bedrock for Foundations Models
- Tech Stack: Migration Python->C#, AWS, PostgreSQL, MongoDB, Lambda, Message Queues, Event Driven, Generative AI

09/2018 - 03/2022

Missouri, USA

● Sr Software Engineer, Azure & SAP Integration

Nestlé

Analysed (Fit & Gap), design and Integrated systems on-premise & cloud via APIs, Azure Data Factory, data replications; deployed with CI/CD automation.

- Developed better integration between SAP / SQL Server and Azure creating new extractors (ABAP and Node.js) and loaders (C#) improving the ETL in 20% running as serverless
- Design, develop and deploy APIs on S4/Hana, RAP, CAPM using Node.js and CPI integrations
- Developing CDS views, simple and complex associations, calculation views, Tables and Store Procedures
- Integrated master data for solution to new legacy system for acquired by Nestlé business
- Migration of large ETLs from different databases like SQLServer, Oracle, SAP Hana using BODS, LSMW
- Creation of events ingestion (real-time data from sensors) into Kafka queues and topics available for subscribers
- Create an integration to consume Google Maps APIs for Purina Pre-Sales Veterinarians to request free samples order to deliver at verified address avoiding duplication or miss use of sampling
- Tech Stack: Interface & Migration, Azure SQL Server, Event Driven, Message Queues, AZ Data Factory, Distributed databases

EXPERIENCE

01/2016 - 08/2018

Missouri, USA

Architect & Engineer, Governance Specialist

Nestlé

I have coordinated and architect solutions for offshore development team, applying Agile processes Scrum and enforcing practices (ABAP, Hana, migration & code remediation for S4/Hana), performing code reviews and improvements.

- Migration from SAP ECC 6 remainder modules to Hana Database and Integrations validations
- Requirements gathering from 8 different teams and creating BDD style documents for technical requirements to offshore coding, teaching them SAP Cloud and XSJS (CAPM) Node.js
- Coaching up to 30 offshore developers on Nestlé's SDLC code standards
- Support stakeholder on meetings with SD, MM, MH, FI, CO teams to discuss the requests creating functional documents (BDD), transform them into Tech Specs and prioritize them for next development cycle
- Interfaces data mapping from legacy system into SAP systems for finance, supply chain, MH, and master data
- Tech Stack: APIs, SAP Cloud, XSJS (new CAPM), Node, Integrations, Legacy Mapping

04/2014 - 12/2015

Missouri, USA

Sr Software Engineer, SAP Developer and 2nd level support

Nestlé

As North America development & coordination, I have meet with functional teams (SC, SD, MH, FICO, MD) to gather their functional requirements, translating them into technical requirements and test scenarios documents and assigning to offshore developers (India) providing the design and architecture to be used and validation of code implemented reviews.

- Support migration/transformation to S4 Hana Finance, code remediation analysis for all SAP teams SD, MM, MH, FICO and HR using Solution Manager/Charm
- Developed interfaces using web services (rest), IDOCs, Flat File, RFCs, Odata + BAPI and CPI and API Management
- Tech Stack: APIs (Web Services - REST) Integrations, ABAP, UI5, Fiori, Integrations

04/2011 - 03/2014

São Paulo, Brazil

Sr Software Engineer, Sr SAP SD Business Analyst & Integration for MH, SC, FICO, MD

Nestlé

Analysis of Fit & Gap of new SAP modules implementation and legacy elimination for Sales & Distribution and Master Data, keeping supporting of all Brazil inbound and outbound interfaces (SC, SD, MH, FICO, MD) SAP vs Legacy integrations.

- Deep understanding of business requirements of all interfaces SAP vs Legacy understanding all process for SC, SD, MH, FICO, MD updating initial Fit & Gap interfaces documentation for project upgrading from SAP Middleware to SAP PI/PO using IDOCs / XML
- Manage module SAP Territory Management, implementation, performing Fit & Gap analysis, data migration, and training
- Tech Stack: Fit & GAP, Migrations & integrations, ABAP, SQL Server, AS/400 DB2, SAP Middleware, SAP PI

08/2008 - 03/2011

São Paulo, Brazil

Software Engineer, Integration SAP interfaces and Legacy systems

Nestlé

Analysis of Fit & Gap of legacy systems, developed and improve Brazil market interfaces between SAP and Main Legacy database for Supply chain(SC), Material Handling(MH), Sales & Distribution (SD), Finance & Cost (FICO) and SAP Master Data(MD)

- Design and support of 30+ SAP interfaces (Inbound & outbound) and coding in ABAP for SD interfaces using change pointer, IDOCs to XML, Middleware setup
- Created replications from IBM DB2 databases to SQLServer and IBM DB2 databases to serve as legacy database using SQL server store procedures, migrating data using C# ADO.NET for DB2
- Changed 40 interfaces from Time based to change pointer improving its accuracy to 100% of document changes become available to external systems (was 85%)
- Using C# and customers data, validate customers address using Google MAPS API when sales representative request merchandise's fridge to be dispatched or order maintenance to existent one, so we could validate the assets' location
- Tech Stack: Migrations & integrations, Fit & GAP, ABAP, SQL Server,HTML, C#, JavaScript, AS/400 DB2, SAP Middleware

01/2005 - 07/2008

São Paulo, Brazil

Software Engineer, Full Stack Dev & Ops

PwC Brasil

Allocated at Nestlé, software engineer responsible for modernization of system to calculate monthly all Nestle Brazil Sales Reps salaries calculated monthly (Base Salary + Sales incentives) from VB to C# web

- Architect/Design and develop new system's version on C# ASP.NET on .Net Framework 2.x, HTML, JavaScript, and CSS
- Using new SAP system data, integrated the interfaces between SAP and legacy main database for migration support
- Tech Stack: SQL Server,HTML, C#, JavaScript, AS/400 DB2, Genexus and Migrations & integrations

05/2004 - 12/2004

São Paulo, Brazil

Software Developer Consultant

WAE TECNOLOGIA

Consulting on analysis, developing, enhancing existent systems and processes

- At Pernod-ricard.com, improved efficiency by 50% of approval process on Java workflow development
- At Honda, analysed and implemented improvements on dealership systems and finance processes
- Tech Stack: SQL Server,HTML, JavaScript, Java, Genexus, AS/400 DB2 and migrations & integrations

EXPERIENCE

04/2003 - 04/2004

São Paulo, Brazil

Software Developer Consultant

Heurys Tecnologia

Worked on wide range of projects for Heurys' customers, analysing current state vs desired bussiness requirement proposing solutions

- Analyses and coding on SQL Server stored procedures, database design, data migration, and integration between systems.
- Migration from DBFs to SQL Server database, applying replication from 30 farms using satellite internet in high latency environment.
- Tech Stack: SQLServer, IIS,HTML, JavaScript, Visual Basic, C#, Oracle, Genexus and migrations & integrations.

01/2000 - 03/2003

São Paulo, Brazil

Systems Analyst Developer

Marist School

Promoted to work in the Marist headquarters as schools system analyst maintain and developing students' system:

- Create web page publishing more than 20,000 students grades online for a peak of 5000 simultaneous access
- Integrated the student's presence at school facilities to Student's administrative system using at entrance's turnstile student's ID using turnstile system and Student's system updating in SQLServer the presence to be checked by teacher in class
- Tech Stack: Could Fusion, ASP, HTML, JavaScript and SQLServer, IIS, Visual Fox Pro, Genexus and migrations & integrations

08/1995 - 12/1999

São Paulo, Brazil

It Assistant

Marist School

Following direction from headquarters guided school admin personal and teachers to new era of technology and early steps into internet and supporting School Administration Systems (Finance and Student records).

- I had to figure out and solve server problems for hardware and software.
- Install Windows NT and make it integrate into the existing Novell network (IPX).
- Helped an IT company on migration of DBFs to SQL Server locally for school systems sent from headquarters.
- Created the first school web page as an intern using HTML and ASP (1995).
- Created a student portal using CGI to retrieve their grades' data from SQL (1998) accessing the SQL data.

07/1994 - 12/1994

São Paulo, Brazil

Intern IT Assistant

Marist School

As high schooler at Marist, I volunteered at school's IT labs assisting on:

- Expanded local network for computers from 5 to 24 on Novell 3.12, pulling Ethernet cables, installing Windows 3.11, Word, Excel.
- Taught school's teachers how to use computers and mouse.
- Successfully installed the first modem US Robotics 56k, sharing it for 24 stations.

EDUCATION

2004

Bachelor on Computer Systems Analysis

Universidade Paulista, Brazil - concluded 2004
